

“The circus creates an infrastructure of information linking each citizen to their representatives”

WIKI-PARLIAMENT

“The Wiki-Parliament Unit is every citizen's link to the debates and votes that shape their lives by making the often hidden machinations of power accessible and visible to everyone.”

Unit in place on the Barrier Highway

Bus Stop version of the unit

Scalability From Voting Booth to Parliament

The smallest unit relates directly to the largest forms of the political system. This is through the use of a standard module that is based on the human form. With this geometry the system has a scalability in which the smallest element (the voting booth or ballot box) to the houses of parliament relate dimensionally and symbolically.

This module would be open and available for all through a freeware license that would allow individuals and companies to develop their own additions or improvements to the political circus.

Logistics Transport & Haulage
The module is thus also applied to all elements of the political circus. The standard constructional sizes lends itself to ease of transportation, in this case truck but also rail and air.

Symbolism Parliamentary Chambers
Both physically and symbolically the houses of parliament also adhere to the module. The basic module scaled up represents the role politicians have in serving every individual in the nation.

INFRASTRUCTURE

“We can all be interested in the Australian Federal Capital City not so much for what it is now or will be necessarily, but because of what it stands for: as an opportunity, the best, I believe, so far afforded for an expression of the democratic civic ideal and of all that means in accessibility, freedom, wealth, comfort, conveniences, scale, and splendor.”

LOCATIONS

State Capitals Key Logistical Locations
Each city has its unique circumstance and opportunity; any proposition to introduce the circus of the government must take into account that it is not the right of government to take public land away from it free public usage. Therefore, although each proposition suggests the use of public land, it is understood as a temporary intervention. Each proposed location takes into account the potential to use and enhance existing infrastructure.
